

COASTAL SURVEILLANCE ASSET DEPLOYMENT & READINESS REPORT
Quarterly Status Brief — Sector West

Reference: NSC/DCSSI/2026/OPS-0417 **Date:** 24 September 2026
From: Directorate of Coastal Surveillance & Systems Integration **Distribution** : Restricted — Named Recipients Only (See Annex C)
To: Officer Commanding, Sector West Coastal Command **Copy No.:** 03 of 07

1. PURPOSE

This report consolidates the operational readiness status of coastal surveillance and monitoring assets deployed under Sector West for the quarter ending September 2026. It is intended solely for the situational awareness of named addressees and is not to be reproduced or forwarded without authorisation from the issuing directorate.

2. SUMMARY OF ASSET STATUS

A total of eleven monitoring installations remain active across the designated coastal stretch. Two installations (Post 4 and Post 9) are undergoing scheduled maintenance and are expected to return to full operational status by the second week of October. No degradation in overall coverage has been assessed during the maintenance window, as adjacent assets provide overlapping coverage.

Post ID	Location Sector	Status	Last Inspection	Remarks
Post 02	West-A	Operational	02 Sep 2026	Nominal
Post 04	West-B	Maintenance	18 Sep 2026	Sensor recalibration
Post 06	West-B	Operational	10 Sep 2026	Nominal
Post 07	West-C	Operational	10 Sep 2026	Nominal
Post 09	West-C	Maintenance	20 Sep 2026	Power module replacement
Post 11	West-D	Operational	05 Sep 2026	Nominal

3. PERSONNEL DEPLOYMENT

Rotational deployment of monitoring personnel continues on the standard six-week cycle. Staffing levels across all active posts remain at or above the minimum operational threshold. No shortfalls have been reported for the current quarter. Training refreshers on updated console procedures have been completed by all Sector West personnel as of the reporting date.

4. RECOMMENDATIONS

It is recommended that the maintenance schedule for Post 04 and Post 09 be reviewed with the equipment vendor to reduce downtime in future cycles. It is further recommended that the next quarterly report include an updated coverage-overlap assessment following completion of the ongoing sensor recalibration work.
